CHAPTER 14: THE LIFELONG JOURNEY

Introduction

In 1995, psychologist Daniel Goleman published Emotional Intelligence: Why It Can Matter More Than IQ, fundamentally changing how we think about success, leadership, and human potential.

His central claim: emotional intelligence (EI) is a better predictor of success than cognitive intelligence (IQ).

The research backs this up:

58% of job performance across all types of jobs is attributable to emotional intelligence (TalentSmart, 2015)

90% of top performers have high emotional intelligence (Bradberry & Greaves, 2009)

People with high EI earn an average of $29,000 more per year than those with low EI (TalentSmart, 2015)

But here's what most people miss: emotional intelligence is not a fixed trait. It's a skill you can develop.

This guide will show you how.

PART 1: UNDERSTANDING EMOTIONAL INTELLIGENCE

CHAPTER 1: WHAT IS EMOTIONAL INTELLIGENCE?

Emotional intelligence is the ability to:

1. Recognize your own emotions
2. Understand what those emotions are telling you
3. Manage your emotional responses
4. Recognize emotions in others
5. Use emotional information to guide thinking and behavior

What EI is NOT:

Being “nice” all the time

Suppressing emotions

Avoiding conflict

People-pleasing

Manipulation

What EI IS:

Understanding that emotions are data, not directives

Choosing your response instead of reacting automatically

Reading social situations accurately

Building genuine connections

Navigating conflict productively

The Four-Domain Model (Goleman, 1998):

1. Self-Awareness: Recognizing your emotions and their effects
2. Self-Management: Managing your emotions and impulses
3. Social Awareness: Understanding others' emotions and perspectives
4. Relationship Management: Using emotional understanding to interact effectively

CHAPTER 2: THE SCIENCE BEHIND EI

The Neuroscience:

Emotions originate in the limbic system (specifically the amygdala), which processes emotional information faster than the prefrontal cortex (the rational brain).

This is why you can feel angry before you consciously know why. The amygdala hijack (Goleman, 1995):

Emotional stimulus triggers the amygdala

Amygdala sends distress signal to hypothalamus

Hypothalamus activates sympathetic nervous system (fight-or-flight)

Stress hormones (cortisol, adrenaline) flood your system

Rational thinking goes offline

Time to hijack: 0.2 seconds Time to recover: 6-20 seconds (depending on intensity)

This is why the “pause” is so powerful.

The good news: The prefrontal cortex can override the amygdala through a process called cognitive reappraisal (changing how you think about a situation to change how you feel about it).

Neuroplasticity: Your brain rewires based on repeated patterns. Every time you practice emotional regulation, you strengthen the neural pathways that support it.

This is why EI is trainable.

CHAPTER 3: WHY EI MATTERS MORE THAN IQ

IQ predicts:

Academic performance

Technical skill acquisition

Problem-solving ability in controlled environments

EI predicts:

Job performance

Leadership effectiveness

Relationship quality

Mental health

Physical health

Life satisfaction The data:

1. Career success

IQ accounts for 10-25% of job performance variance

EI accounts for 27-45% of job performance variance (Hunter & Schmidt, 2004)

1. Leadership

71% of employers value EI over IQ when hiring (CareerBuilder, 2011)

Leaders with high EI have teams with 20% higher performance (Goleman, 2000)

1. Health

Low EI is associated with higher stress, anxiety, and depression (Schutte et al., 2007)

High EI predicts better physical health outcomes (Martins et al., 2010)

1. Relationships

EI is the #1 predictor of relationship satisfaction (Brackett et al., 2005)

Partners with high EI report 31% higher relationship quality

Why?

Because life is not a test. Life is a series of interactions, decisions under uncertainty, and responses to unpredictable events.

IQ helps you solve known problems. EI helps you navigate unknown situations.

PART 2: THE FOUR PILLARS

CHAPTER 4: SELF-AWARENESS - KNOWING YOURSELF

Definition: The ability to recognize and understand your own emotions, strengths, weaknesses, values, and drivers, and their impact on others. Why it's the foundation: You can't manage what you don't recognize. All other EI skills depend on self-awareness.

Components of self-awareness:

1. Emotional awareness

Recognizing your emotions as they happen

Understanding the intensity of your emotions

Knowing your emotional triggers

1. Accurate self-assessment

Knowing your strengths and limitations

Being open to feedback

Continuous learning mindset

1. Self-confidence

Strong sense of self-worth

Ability to present yourself with assurance

Willingness to voice unpopular views

How to develop self-awareness:

1. Emotion labeling (affect labeling)

Research by UCLA neuroscientist Matthew Lieberman (2007) shows that putting feelings into words reduces amygdala activity by up to 50%.

Practice:

When you feel something, name it specifically

Use an emotion wheel (Plutchik, 1980) to expand your emotional vocabulary

Instead of “I feel bad,” try “I feel anxious about the presentation”

Common emotions and their nuances:

Anger: frustrated, irritated, resentful, furious, livid

Sadness: disappointed, discouraged, hopeless, grief-stricken Fear: anxious, worried, terrified, panicked, uneasy

Joy: content, satisfied, excited, ecstatic, grateful

1. Body scanning

Emotions manifest physically before you’re consciously aware of them.

Physical signatures:

Anxiety: tight chest, shallow breathing, racing heart, tense shoulders

Anger: clenched jaw, flushed face, tense fists, heat in chest

Sadness: heavy limbs, low energy, tight throat, slumped posture

Joy: lightness, open chest, relaxed muscles, smiling

Practice: Set 3 daily alarms. When they go off:

1. Pause
2. Scan your body from head to toe
3. Notice any tension, tightness, or discomfort
4. Ask: “What emotion might this be?”
5. Trigger tracking

Most emotional reactions are predictable if you know your triggers.

How to track: Keep a simple log (digital or paper):

Situation: What happened?

Trigger: What specifically set you off?

Emotion: What did you feel?

Intensity: 1-10 scale

Response: What did you do?

Outcome: What happened?

Patterns emerge after 7-14 days.

Common triggers:

Feeling disrespected Feeling controlled

Feeling ignored

Feeling criticized

Feeling overwhelmed

1. Values clarification

Your values are your emotional compass. When your actions align with your values, you feel fulfilled. When they conflict, you feel distress.

Exercise:

1. List 10 things that matter most to you
2. Narrow to top 5
3. Rank them
4. For each value, ask: “How am I honoring this in my life?”
5. Feedback seeking

Your blind spots are, by definition, invisible to you. Others can see them.

How to seek feedback:

Ask specific questions: “How do I come across when I’m stressed?”

Ask people who will be honest

Listen without defending

Thank them (even if it stings)

Practice plan:

Week 1-2: Emotion labeling + body scanning

Week 3-4: Trigger tracking

Month 2: Values clarification + feedback seeking

Ongoing: All of the above Chapter 5: Self-Management - Controlling Yourself

Definition: The ability to control impulsive feelings and behaviors, manage emotions in healthy ways, take initiative, follow through on commitments, and adapt to changing circumstances.

Why it matters: Between stimulus and response, there is a space. In that space is your power to choose your response. In that choice lies your growth and freedom. (Viktor Frankl, paraphrased)

Self-management is about expanding that space.

Components of self-management:

1. Self-control

Managing disruptive emotions and impulses

Staying composed under pressure

Thinking clearly when stressed

1. Trustworthiness

Maintaining standards of honesty and integrity

Being accountable for personal performance

Admitting mistakes

1. Conscientiousness

Meeting commitments and keeping promises

Being organized and careful in work

Taking responsibility for performance

1. Adaptability

Handling change with flexibility

Being comfortable with ambiguity

Adjusting responses to fit fluid circumstances

1. Achievement drive Striving to improve or meet a standard of excellence

Setting challenging goals

Taking calculated risks

How to develop self-management:

1. The 6-second rule

Emotional chemicals (cortisol, adrenaline) take approximately 6 seconds to flush through your bloodstream and dissipate.

Practice:

When triggered, count to 6 before responding

Breathe deeply during the count

This simple pause prevents 90% of regrettable reactions

The neuroscience: The 6-second pause gives your prefrontal cortex time to come back online and override the amygdala hijack.

1. Cognitive reappraisal

Reappraisal is changing how you think about a situation to change how you feel about it.

Research: Reappraisal is one of the most effective emotion regulation strategies, associated with better mental health, relationships, and well-being (Gross & John, 2003).

Examples:

Traffic jam: “I’m stuck” → “I have 20 minutes to listen to that podcast”

Failed diet day: “I have no discipline” → “I learned my trigger foods”

Criticism: “They hate me” → “They’re giving me data to improve”

Rejection: “I’m not good enough” → “This wasn’t the right fit”

How to practice:

1. Notice your automatic interpretation
2. Ask: “Is there another way to see this?”
3. Generate 2-3 alternative interpretations
4. Choose the most useful one
5. Implementation intentions (if-then planning)

Research by Peter Gollwitzer (1999) shows that implementation intentions increase goal achievement by 2-3x.

Format: “If [trigger situation], then I will [specific response].”

Examples:

“If I feel angry during a meeting, then I will take 3 deep breaths before speaking”

“If I crave junk food at night, then I will drink water and wait 10 minutes”

“If I feel overwhelmed, then I will write down everything on my mind”

“If someone criticizes me, then I will say ‘thank you for the feedback’ and reflect later”

Why it works: Pre-deciding your response bypasses the need for willpower in the moment.

1. Stress inoculation

Expose yourself to manageable levels of stress to build resilience.

Examples:

Cold showers (physiological stress)

Public speaking (social stress)

Fasting (hunger stress)

Hard workouts (physical stress)

The principle: What doesn’t kill you makes you stronger—if the dose is right.

1. Energy management

You can’t manage emotions when you’re depleted.

The basics:

Sleep: 7-9 hours (non-negotiable) Nutrition: stable blood sugar (avoid crashes)

Movement: 30+ minutes daily

Recovery: breaks every 90 minutes

Practice plan:

Week 1-2: 6-second rule + reappraisal

Week 3-4: Implementation intentions

Month 2: Stress inoculation + energy management

Ongoing: All of the above

CHAPTER 6: SOCIAL AWARENESS - UNDERSTANDING OTHERS

Definition: The ability to understand the emotions, needs, and concerns of other people, pick up on emotional cues, feel comfortable socially, and recognize the power dynamics in a group or organization.

Why it matters: No one achieves anything alone. Your ability to read and respond to others determines your success in relationships, work, and life.

Components of social awareness:

1. Empathy

Sensing others' feelings and perspectives

Taking active interest in their concerns

Anticipating, recognizing, and meeting their needs

1. Organizational awareness

Reading the currents of organizational life

Building decision networks

Detecting crucial social networks

1. Service orientation

Anticipating, recognizing, and meeting others' needs

Fostering an emotional climate to keep relationships on track Monitoring satisfaction to ensure quality

How to develop social awareness:

1. Active listening

Most people listen at 25% capacity. You can dominate social situations by listening at 75%.

The levels of listening:

1. Ignoring: Not listening at all
2. Pretending: Acting like you're listening
3. Selective: Hearing only what you want to hear
4. Attentive: Paying attention to words
5. Empathic: Understanding feelings and meaning

How to listen actively:

Eliminate distractions (put phone away)

Make eye contact

Don't interrupt

Don't plan your response while they're talking

Reflect back: "So what you're saying is..."

Ask clarifying questions

Validate their feelings: "That sounds frustrating"

1. Nonverbal reading

93% of communication is nonverbal (Mehrabian, 1971):

55% body language

38% tone of voice

7% words

What to watch:

Facial expressions: Genuine smile: eyes crinkle (Duchenne smile)

Fake smile: mouth only

Microexpressions: fleeting (1/25th second) expressions of concealed emotions

Body language:

Open posture: receptive, confident

Closed posture: defensive, uncomfortable

Leaning in: interested

Leaning back: disengaged

Crossed arms: defensive (or cold—context matters)

Tone of voice:

Pitch: high = anxious, low = calm

Speed: fast = excited/anxious, slow = calm/sad

Volume: loud = confident/angry, quiet = uncertain/sad

Eye contact:

Too much: aggressive or romantic

Too little: uncomfortable or deceptive

Just right: engaged and respectful

1. Perspective-taking

Empathy is a skill, not a feeling. You can practice it.

How to practice:

Before reacting, ask: “What might they be dealing with that I don’t know about?”

Everyone is fighting a battle you know nothing about

Assume positive intent until proven otherwise

The empathy formula:

1. Recognize the emotion
2. Understand the cause
3. Respond appropriately
4. Cultural intelligence

Different cultures express and interpret emotions differently.

Examples:

Eye contact: respectful in US, disrespectful in some Asian cultures

Directness: valued in Germany, rude in Japan

Emotion expression: encouraged in Latin cultures, discouraged in British culture

Practice:

Learn about the cultural backgrounds of people you interact with

Ask questions when unsure

Observe before assuming

Practice plan:

Week 1-2: Active listening practice

Week 3-4: Nonverbal reading

Month 2: Perspective-taking exercises

Ongoing: All of the above

CHAPTER 7: RELATIONSHIP MANAGEMENT - CONNECTING WITH OTHERS

Definition: The ability to develop and maintain good relationships, communicate clearly, inspire and influence others, work well in a team, and manage conflict.

Why it matters: Your network is your net worth. Your ability to build and maintain relationships determines your opportunities, support system, and quality of life.

Components of relationship management:

1. Influence

Wielding effective persuasion tactics

Fine-tuning presentations to appeal to listeners

Using complex strategies to build consensus

1. Communication

Sending clear and convincing messages

Listening openly and sending convincing messages

Dealing with difficult issues straightforwardly

1. Conflict management

Handling difficult people and tense situations

Spotting potential conflict and bringing disagreements into the open

Encouraging debate and orchestrating win-win solutions

1. Leadership

Inspiring and guiding individuals and groups

Articulating and arousing enthusiasm for a shared vision

Stepping forward to lead as needed

1. Change catalyst

Recognizing the need for change and removing barriers

Challenging the status quo

Championing the change and enlisting others

1. Building bonds

Cultivating and maintaining extensive informal networks

Seeking out mutually beneficial relationships

Building rapport and keeping others in the loop

1. Teamwork and collaboration

Modeling team qualities like respect, helpfulness, and cooperation

Drawing all members into active participation

Building team identity and commitment

How to develop relationship management:

1. Clear communication

The formula:

Say what you mean: Be direct, not passive-aggressive

Mean what you say: Follow through on commitments

Don't say it mean: Be honest AND kind

Use "I" statements:

Instead of: "You always interrupt me"

Try: "I feel frustrated when I'm interrupted because I lose my train of thought"

Be specific:

Instead of: "You need to communicate better"

Try: "I need you to text me if you'll be more than 15 minutes late"

1. Conflict resolution

The principle: Address issues early. Small problems become big resentments.

The process:

1. Identify the real issue (not the surface complaint)
2. Focus on the problem, not the person
3. Seek to understand before being understood
4. Look for win-win solutions (not victories)
5. Agree on next steps

Example:

Surface: "You never do the dishes"

Real issue: "I feel like I'm carrying the household burden alone"

1. Influence without authority

The principle: People don't care how much you know until they know how much you care. The process:

1. Build trust first (be reliable, honest, competent)
2. Understand their goals (what do they want?)
3. Frame your request in terms of their goals
4. Make it easy for them to say yes

Example:

Instead of: "I need you to help me with this project"

Try: "This project will give you visibility with leadership, which I know is important for your promotion. Would you be interested in collaborating?"

1. Giving feedback

The SBI model (Situation-Behavior-Impact):

1. Situation: "In yesterday's meeting..."
2. Behavior: "...when you interrupted Sarah..."
3. Impact: "...it seemed like you didn't value her input, and she shut down for the rest of the meeting."

Then ask: "What was going on for you?"

1. Receiving feedback

The process:

1. Listen without defending
2. Ask clarifying questions
3. Thank them (even if it stings)
4. Reflect privately
5. Decide what to do with it

Remember: Feedback is data, not truth. You decide what to do with it.

Practice plan:

Week 1-2: Clear communication practice Week 3-4: Conflict resolution

Month 2: Influence and feedback

Ongoing: All of the above

PART 3: ADVANCED APPLICATIONS

CHAPTER 8: EMOTIONAL INTELLIGENCE IN TRANSFORMATION

Why EI matters for body transformation:

1. Emotional eating

Research shows that 75% of overeating is driven by emotions, not hunger (Macht, 2008).

The cycle:

1. Trigger (stress, boredom, loneliness)
2. Emotion (anxiety, sadness, emptiness)
3. Craving (for comfort, distraction, numbness)
4. Eating (temporary relief)
5. Guilt/shame (which triggers more eating)

The EI solution:

1. Recognize the emotion (self-awareness)
2. Name it (affect labeling)
3. Understand the trigger (self-awareness)
4. Choose an alternative response (self-management)

Alternative responses:

Call a friend (connection)

Go for a walk (movement)

Journal (processing) Drink water and wait 10 minutes (delay)

1. Consistency

Discipline is not a personality trait. It's an emotion management skill.

The truth: You don't "lack motivation." You lack emotional regulation around discomfort.

The discomfort:

Hunger (caloric deficit)

Fatigue (training)

Boredom (repetition)

Social pressure (saying no)

The EI solution:

1. Expect discomfort (it's not a problem)
2. Reframe it (discomfort = progress)
3. Tolerate it (you can handle more than you think)
4. Use implementation intentions (pre-decide your response)
5. Self-sabotage

Most self-sabotage is unconscious emotional protection.

Common patterns:

"If I don't try, I can't fail"

"If I succeed, people will expect more from me"

"If I change, I won't fit in anymore"

"I don't deserve success"

The EI solution:

1. Recognize the pattern (self-awareness)
2. Understand the fear (what are you protecting yourself from?)
3. Challenge the belief (is it true?)
4. Take action anyway (courage is action despite fear)

Application: Next time you want to eat when you're not hungry:

1. Pause
2. Ask: "What am I actually feeling?"
3. Name it
4. Choose your response

CHAPTER 9: EI AND LEADERSHIP

Why EI matters for leadership:

Research by Daniel Goleman (2000) found that emotional intelligence accounts for nearly 90% of what sets high performers apart from peers with similar technical skills and knowledge.

The data:

Leaders with high EI have teams with 20% higher performance

71% of employers value EI over IQ when hiring leaders

EI is the #1 predictor of leadership effectiveness

EI in leadership:

1. Self-awareness

Know your strengths and limitations

Seek feedback actively

Admit mistakes openly

1. Self-management

Stay calm under pressure

Model emotional regulation

Adapt to change

1. Social awareness Read the room

Understand team dynamics

Anticipate needs

1. Relationship management

Inspire and motivate

Resolve conflicts

Build trust

Leadership practices:

1. Emotional check-ins Start meetings with: “How is everyone doing?” and actually listen.
2. Transparent communication Share your thinking, not just your conclusions.
3. Vulnerability Admit when you don’t know. Ask for help.
4. Recognition Acknowledge effort and progress, not just results.
5. Psychological safety Make it safe to fail, question, and disagree.

CHAPTER 10: EI IN CONFLICT RESOLUTION

The principle: Conflict is inevitable. Damage is optional.

The EI approach to conflict:

1. Manage your own emotions first

You can't resolve conflict while emotionally hijacked

Use the 6-second rule

Reframe: conflict = opportunity for understanding

1. Seek to understand

Listen to understand, not to respond

Ask: "Help me understand your perspective" Reflect back what you heard

1. Validate emotions

You don't have to agree to validate

"I can see why you'd feel that way"

Validation ≠ agreement

1. Focus on interests, not positions

Position: "I want the window open"

Interest: "I need fresh air"

Solution: Open a different window, turn on a fan, etc.

1. Collaborate on solutions

Brainstorm together

Look for win-win

Be willing to compromise

Example:

Conflict: Your partner is upset that you're spending too much time at the gym.

Low EI response: "You're being controlling. I need to train."

High EI response:

1. Manage your defensiveness (6-second rule)
2. Seek to understand: "Help me understand what's bothering you"
3. Listen: "You feel like we're not spending enough quality time together"
4. Validate: "I can see why you'd feel that way. I have been gone a lot."
5. Collaborate: "What if we scheduled 3 dedicated date nights per week, and I trained during times that don't cut into our time together?"

CHAPTER 11: BUILDING YOUR EI PRACTICE

The principle: Emotional intelligence is a skill. Skills require practice. Daily habits:

1. Morning check-in (2 minutes)

How do I feel today?

What might trigger me today?

How do I want to show up?

1. Midday pause (1 minute)

Body scan

Emotion check

Course correct if needed

1. Evening reflection (3 minutes)

What emotions did I experience today?

How did I handle them?

What would I do differently?

Weekly practice:

1. Review your emotion log

What patterns do you notice?

What triggers showed up repeatedly?

How did you respond?

1. Identify one area to focus on

Self-awareness, self-management, social awareness, or relationship management?

What specific skill within that area?

1. Practice deliberately

Set a specific goal

Create implementation intentions

Track your progress Monthly assessment:

1. Rate yourself 1-10 on each pillar:

Self-awareness: ___

Self-management: ___

Social awareness: ___

Relationship management: ___

1. Choose one area to focus on
2. Set a specific goal Example: “Improve self-management by using the 6-second rule before responding to criticism”
3. Track progress

How many times did you use the skill?

What was the outcome?

What did you learn?

Tools:

1. Emotion wheel Expand your emotional vocabulary beyond “good,” “bad,” “fine.”
2. Trigger log Track: Situation → Emotion → Intensity → Response → Outcome

3. Feedback journal Record feedback you receive and what you learned from it.
4. Gratitude practice Write 3 things you’re grateful for daily. Gratitude rewires your brain for positivity.
5. Meditation Even 5 minutes daily improves emotional regulation.

PART 4: INTEGRATION

CHAPTER 12: COMMON PITFALLS AND HOW TO AVOID THEM

Pitfall #1: Emotional suppression The mistake: Trying to “not feel” negative emotions.

Why it backfires: Suppressed emotions don’t disappear. They leak out in other ways (irritability, physical symptoms, explosive outbursts).

The solution: Feel your emotions. Name them. Process them. Then choose your response.

Pitfall #2: Over-empathizing

The mistake: Taking on others’ emotions to the point of burnout.

Why it backfires: You can’t help anyone if you’re depleted.

The solution: Empathy ≠ absorption. Understand their feelings without making them yours.

Pitfall #3: Avoiding conflict

The mistake: Keeping the peace at all costs.

Why it backfires: Unaddressed issues fester and explode later.

The solution: Address issues early. Be kind AND direct.

Pitfall #4: Perfectionism

The mistake: Expecting to master EI overnight.

Why it backfires: Perfectionism leads to shame, which leads to giving up.

The solution: Progress, not perfection. Celebrate small wins.

Pitfall #5: Using EI to manipulate

The mistake: Using emotional intelligence to control or deceive others.

Why it backfires: People sense inauthenticity. Trust is destroyed.

The solution: Use EI ethically. Build genuine connections.

CHAPTER 13: MEASURING YOUR PROGRESS

The challenge: EI is harder to measure than IQ. The solution: Track behavioral indicators.

Self-awareness indicators:

I can name my emotions accurately

I know my triggers

I seek feedback regularly

I understand my values

Self-management indicators:

I pause before reacting

I adapt to change without excessive stress

I follow through on commitments

I stay calm under pressure

Social awareness indicators:

I read nonverbal cues accurately

I understand others' perspectives

I listen more than I talk

I sense group dynamics

Relationship management indicators:

I resolve conflicts productively

I communicate clearly

I build trust easily

I influence without authority

Assessment tools:

1. EQ-i 2.0 (Emotional Quotient Inventory)

2. MSCEIT (Mayer-Salovey-Caruso Emotional Intelligence Test)

1. 360-degree feedback (ask others to rate your EI)

DIY assessment: Rate yourself 1-10 on each indicator above. Reassess monthly. Chapter 14: The Lifelong Journey

The truth: You will never “master” emotional intelligence. You will always be practicing.

Why that’s good news: Every interaction is an opportunity to improve.

The goal: Not perfection. Progress.

The practice:

1. Notice your emotions
2. Name them

3. Understand them
4. Choose your response
5. Reflect on the outcome
6. Adjust for next time

The promise: If you practice these skills consistently, you will:

Make better decisions

Build stronger relationships

Lead more effectively

Handle stress more gracefully

Live more intentionally

The reminder: Emotions are not the enemy. They're data.

Learn to read them.

Conclusion

Emotional intelligence is not about being "nice" or "soft."

It's about being effective.

It's about understanding that emotions drive behavior, and behavior drives outcomes. It's about choosing your response instead of being controlled by your reactions.

It's about building genuine connections instead of transactional relationships.

It's about leading yourself before you try to lead others.

The four pillars:

1. Self-awareness: Know yourself
2. Self-management: Control yourself

3. Social awareness: Understand others
4. Relationship management: Connect with others

The practice: Start with self-awareness. Everything else follows.

The commitment: 1% better every day.

The outcome: A life of intention, connection, and mastery.
